This example demonstrates the typical streaming technique:

1. Open the device.
2. Configure analog inputs.
3. Configure & start the stream.
4. Read chunks of stream data in a loop once or twice a second.
5. Stop the stream.
6. Close the device.

For background on streaming, the T7 stream section is useful, but the LJM stream section is even more applicable:

<https://labjack.com/support/datasheets/t7/communication/stream-mode>  
<https://labjack.com/support/software/api/ljm/function-reference/stream-functions>

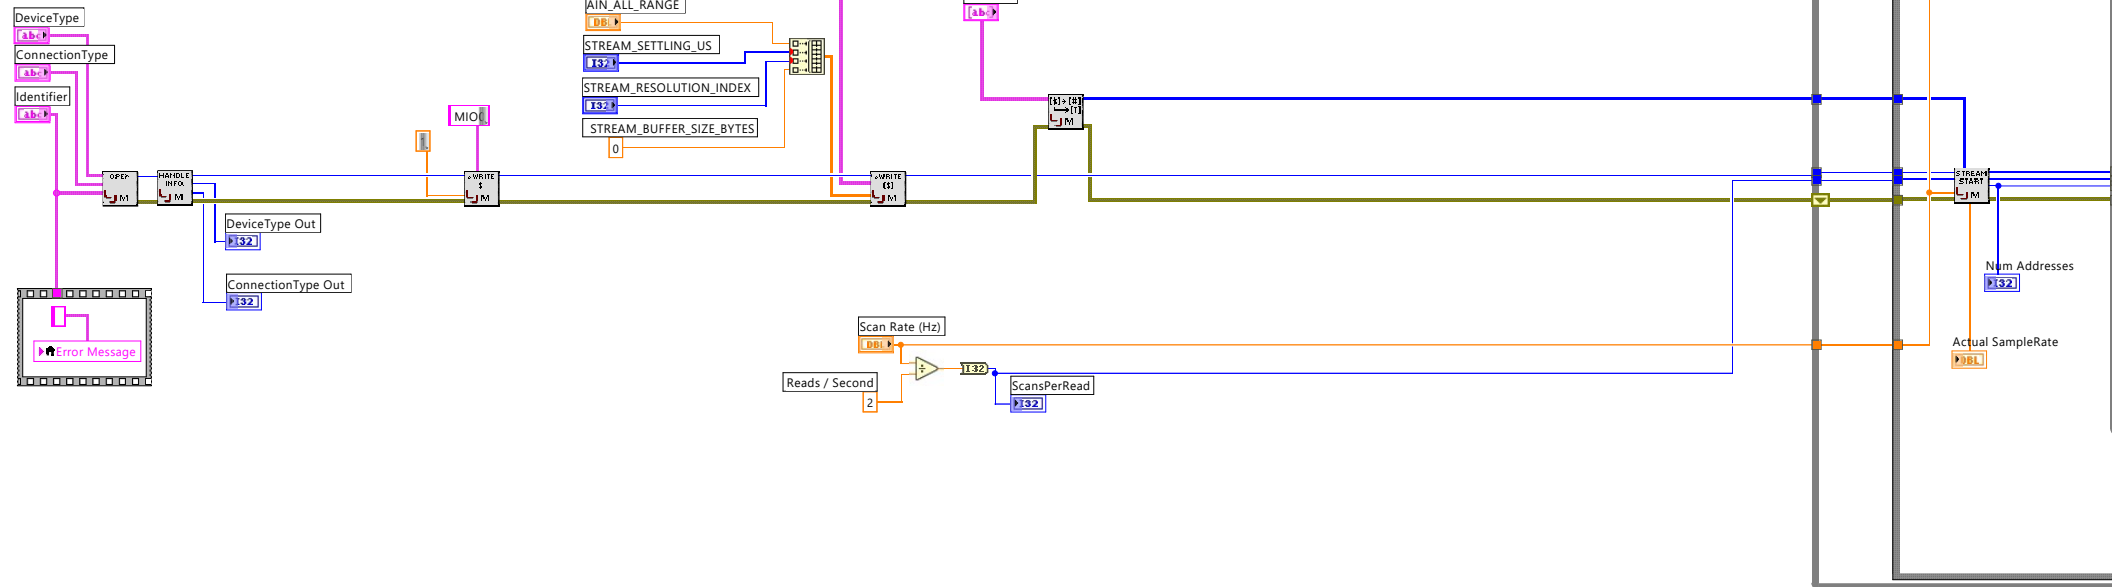

These 2 calls are opening the device and displaying info about which device was opened.

This call is configuring analog inputs.

This call is converting the scan list of names to a list of addresses.

This call is starting the stream.

Add is added to create false
